Date of figures used for: Landfills-2002 Transfer Stations: RDCK-2002 RDKB-2003

<sup>1</sup> Reference: Western BioResources Consulting Ltd., Hog Fuel Composting Feasibility Study, March 4, 2002, Project #026-08.03. Includes 10,000 dry tonnes of hog fuel (mc 65%), 6,000 dry tonnes of biosolids (mc77.9% dewatered-hog fuel study) and 300 tonnes of knots.

<sup>2</sup> Reference: Hamilton, C., Feasibility Study of Wood Residue Use, wood residue is broken down as follows: Bark 46812 tonnes, Sawdust/shavings 45239 tonnes, Trim ends 349 tonnes, Hog 29700 tonnes, Slabs 1364 tonnes, Other wood (contaminated with dirt) 7552 tonnes (may need to remove this number since it cant be used in technology). These numbers do not include wood directly associated with logging activities or residues used for landfilling, burning, site storage or incineration.
